

MUHAMMAD RIDWAN FAUZI

Freelance Web Developer

SUMMARY

Since graduating from high school, I spent 2 years joining organizations related to human development. Until finally at the end of 2020, I was invited by a friend to join the Muslim Hackathon. I was asked to become a developer because my friend knew that I had basic programming skills. We managed to get the title of finalist by presenting the ZaPaS application which is able to map zakat data so that zakat distribution can be evenly distributed. From there, I started to focus on learning more about web programming. My website project after that was a website that was able to do online psychological tests that managed to attract 4000+ users with a turnover of Rp. 150 million in a month.
